LAGER & HURRELL ORCHIDS SUMMIT NEWJERSEY

ORCHIDS FRESHLY IMPORTED AND UNESTABLISHED

During the warm season of the year we receive shipments of freshly gathered Orchids from the forests of the tropics. We sell these by the dozen, hundred, or by the box. You have to pot and establish these yourself. It is highly interesting work. If you wish to try any of these unestablished imported Orchids, write us and we will inform you what kinds we have and the prices thereof.

VANDA SANDERIANA

For description of Vanda Sanderiana see page 46

Should you want anything in Orchids not named in this catalogue, write us. The chances are we have your wants in stock, although not catalogued.

LAGER & HURRELL

TO OUR CUSTOMERS

E take pleasure in presenting you with this Catalogue, in the preparation of which we have spared no effort to make it attractive, serviceable and original.

The Catalogue is arranged alphabetically throughout so that no confusion is possible in looking for any kind of plants wanted.

Special collections of Orchids for beginners, books on Orchids and Supplies will be found on the last pages.

Personal attention is given to every order, however small. All plants are selected with the greatest care and no expense is spared in the packing of same, thus insuring their safe arrival at the most distant points.

We would respectfully ask our foreign customers to always instruct us to forward by express and not by mail. In sending by express we can pack in properly ventilated boxes: this reduces risks to a minimum, while by mail the plants are deprived of air, so necessary for their welfare at all times.

This Catalogue is by no means complete, but represents the bulk of our stock at the date of publication.

We are constantly receiving fresh importations of Orchids direct from the forests of Mexico, Central and South America, and the East Indies; and upon receipt of such importations our customers will be notified by letters or circulars, stating varieties received and prices thereof.

Our place of business is situated on Morris Avenue, Summit, N. J., twenty miles from New York, on the D., L. & W. R. R.

How to reach our place from New York. Take any of the ferries at Barclay, Christopher or 23d St., or the Hudson tubes from the Hudson Terminal or any of the stations on 6th Ave. to Hoboken, and thence by the Lackawanna R. R. to Summit, N. J. The journey takes less than one hour. Once in Summit, a cab will take you to our place in a few minutes, or you can take a north-bound trolley which passes our property on Morris Ave.

Owing to the great number of species and varieties of Orchids grown by us, we have at all times something of interest to show visitors, whom we welcome here at any time.

We are ready to furnish our customers with advice at any time and on any subject pertaining to Orchids.

TERMS ON WHICH WE DO BUSINESS

All orders, correspondence or communications of any kind should be addressed to LAGER & HUR-RELL, Orchid Growers and Importers, Summit, N. J.

Remittances may be made by check, drafts on New York, money orders on Summit, N. J., express money orders, or by money in registered letters.

Orders from Unknown Parties must be accompanied by remittance or satisfactory references.

It is important that Name and Address should be written as plainly as possible, to prevent mistakes. No charge is made for boxes or packing, or delivery at the railroad station and we guarantee the safe arrival of all goods sent by express, but are in nowise responsible, after they leave our hands or for goods sent by freight.

Complaints, if any, should be made directly on receipt of goods. We promise prompt and just treatment of all claims presented.

Prices quoted in this Catalogue are as low as it is possible to make them, consistent with A1 stock, and are net cash, f. o. b. Summit, N. J.

Discount. 2% may be deducted when cash is sent with order, or if remittance is received within 10 days from date of shipment, after which time we cannot allow any discount. For all bills not paid within 30 days, we shall take the liberty to draw for the amount due. On any accounts running over 30 days, 6% interest will be charged.

Prices in this Catalogue are liable to fluctuations, according to the market.

ORCHIDS—CULTURAL DIRECTIONS

Orchids were never more popular than they are at present, due to the fact that they are, without question, the handsomest, the strangest, and the most lasting flowers in all the floral kingdom.

Most private collections have some representative of this queenly class of plants, while the florists are well convinced of the fact that, to keep pace with the times, they must grow Orchids, the demand for which is daily increasing. Below we are simply repeating what we have said these last 15 years regarding the culture in **general** of Orchids in **this** country and we see no reason to change at present. The fact that some of our competitors have flattered us by copying these directions shows that they are well adapted to our conditions.

Orchids are the most easily grown plants of any, if a few common-sense points are observed. The cardinal points are: First, plenty of air at all times; during the Summer months have the ventilators open night and day. Second, an abundance of light without being exposed to the full sun, which is too strong, but have the glass lightly shaded. Third, an abundant supply of water when watering, permitting the plants to dry out well occasionally so as not to get them sour. Fourth, place the plants from 18 inches to 4 feet at the most from the glass. A night temperature of 58-60° and correspondingly higher during the day will suit the greatest number of Orchids, where only one small greenhouse is available.

A great many Epiphytal Orchids need a season of growth and rest. The growing season commences when the plants begin to grow, when they should receive the maximum amount of moisture.

As soon as the growth is completed the plant should receive less water, so as to ripen the pseudo-bulb and thus insure good flowering. Under no circumstances should water be withheld so as to cause the plant to shrivel. When the buds appear, give light syringings of water, so as to develop the flower to perfection. After the flowering season is over the plant generally begins to show signs of growth, when it should receive potting or rebasketing if needed; if not, then only a top dressing of sphagnum moss, and the plant may be started into growth again. It may be well to mention in connection with the foregoing that there are exceptions to this treatment, our climate being much

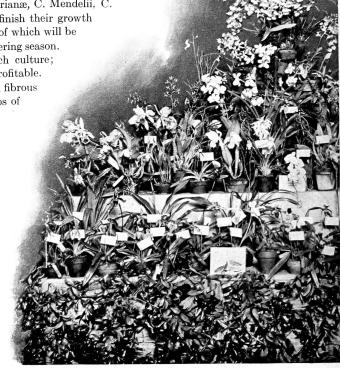

more favorable for Orchids than that of Europe, as a whole, notably for Orchids found on this hemisphere or such species as are found in Central and South America. In particular, the Colombian Cattleyas have scarcely any resting season in their own country (with the exception, perhaps, of C. Schræderæ), on account of the short rainy and dry seasons, both of which are never extreme; and we find here that such Cattleyas as C. Trianæ, C. Mendelii, C. Chocoensis and C. Percivaliana will finish their growth and start another, sometimes two, all of which will be fully developed and ready for the flowering season.

European growers would resent such culture; here it is sometimess necessary and profitable.

The best potting material is good fibrous peat and sphagnum moss, with lumps of charcoal and potsherd intermixed.

Firm potting is absolutely necessary, as no Orchid will grow well if it is loosely potted. In repotting, care should be taken not to disturb the roots, rather break the pots, while the baskets may be taken apart carefully or set into a larger one and material worked around. Avoid overpotting and do not disturb the plants unless necessary. With these general cultural directions any beginner will be able to grow Orchids and reap a rich harvest of their exquisite flowers.

For further and more detailed information we respectfully advise the procuring of some book on Orchids. A list of such books will be found on page 52 of this Catalogue.

CATTLEYA

C. Orpetiana. (See illustration, page 6)...... 3.50 C. viridi-flavum.....

Cattleya Dowiana-See page 10

The Cattleva is an exceptionally interesting and desirable subject of the Orchid family. With its closely allied genus, Lælia, it ranks among the most popular, showy and useful of all Orchids. The large, exquisitely beautiful and often sweet-scented flowers are produced in ever-changing and attractive combinations, and being admirably adapted for decorative work at all kinds of functions, they are in constant demand Cattleyas are indigenous to the Western Hemisphere, South and Central America being the regions where they abound. The species vary in habit, but practically in all the flowers are borne on upright scapes. They are easy of culture and thrive in a medium temperature of 58-60° by night and 64-70° by day and moist atmosphere, with plenty of light and ventilation. Pots, pans or baskets in which they are placed should be well drained; use good

fibrous peat and sphagnum moss, together with small pieces of broken charcoal and crocks. The plants require shading during bright Summer sunshine, though it must be remembered that they love the light, and a dark, gloomy house should therefore be avoided.

All those marked with an X are hybrids and require the same cultural conditions as the species.

C. Mossiæ lilacina. Flowers large, of rose color, lip marked with purple, yellow and light rose......\$10.00 to 15.00

C. Mossiæ Reineckiana var. lilacina.......\$15.00 to 20.00

C. Mossiæ Wagneri. (Syn. alba.).....\$35.00 to 50.00

C. × Murrayi (Lawrenceana × C. Mendelii). A fine hybrid with rose purple sepals and petals and large, dark-purple lip. April......\$10.00 to 15.00

C. \times Olivia (C. intermedia \times C. Trianæ). A superb hybrid.

\$15.00 to 20.00

CATTLEYA-Continued

C. Percivaliana (Christmas Each Cattleya). The flowers are of deep rosy-purple color, with richly colored lip of deep crimson, purple and golden-yellow. Requires same treatment as Cattleya Trianæ. This variety is invaluable for cutting, flowering, as it does, from November to February. Venezuela.

Fine plants... \$2.50 to \$3.50 Half specimens 5.00 to 10.00 Large specimens..... 15.00 to 35.00

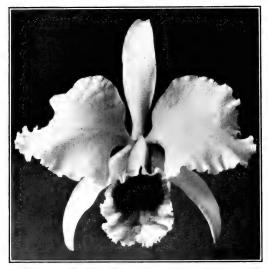

C. Percivaliana alba. Small plants, from \$25,00, \$50.00 and up.

C. Percivaliana atropurpurea. Flowers reddish purple all over, except the lip, which is dark purple. 15.00

C. Percivaliana aurora. Flowers very large and of fine shape, rosy lavender with a large lip of same color and with a small purple blotch in the center surrounded with yellow and purple veins.....

C. Percivaliana grandiflora. A very fine form, with unusually large flowers...\$10.00 to 15.00

C. Percivaliana oreol. A handsome variety of fine shape and rare purple flowers. The lip is orange-yellow, veined with crimson, with a blotch of crimson purple in the center................ 25.00

Cattleya Percivaliana var. Stanley Ranger

Cattleya Percivaliana

Cattleya I citivaliana	
C. Percivaliana spectabile. Flowers hand- some and well proportioned, purplish lilac. Lip large and showy with the disc of darkest purple, bordered by a broad band of rose purple	
C. Percivaliana Stanley Ranger. A very fine, large and handsome variety of purplish lilac, with a very broad lip of rose and dark purple	00.00
and lilac fringe	20.00
C. Percivaliana superba. A fine, well-shaped variety with rose purple flowers, with a lip of rose, dark purple and crimson blended	15.00
C. Percivaliana Roeblingiana. Sepals and petals pure white, lip rose and crimson purple, with a broad, white border	50.00
C. \times Pittiana (C. Dowiana \times C. granulata).	05.00
\$15.00 to C × Portia (C Rowringiana × C labiata)	
C. × Portia (C. Bowringiana × C. labiata). (See illustration, page 48.)\$5.00 to	10.00
C. Rex (The Royal Cattleya)	25.00
C. Schilleriana. Resembling C. Aclandiæ, but is much stronger, with dark rounded foliage; flowers in Summer from the young growths, with deep, rosy-colored large flowers, sometimes spotted; lip with darker stripes and	
shadings with pink margin. Brazil	5.00
C. Schofieldiana. Handsome and distinct; flowers pale, tawny yellow, flushed with purple and green, the entire surface spotted with	
crimson-purple. July-August. Brazil	5.00°
$\mathbf{C.} \times \mathbf{Schofieldiana} \times \mathbf{C.}$ aurea\$15.00 to	
$\mathbf{C.} \times \mathbf{Schofieldiana} \times \mathbf{C.}$ Mendelii 15.00 to	20.00
C. \times Schofieldiana \times C. Hardyana. 15.00 to	25.00
C. Schræderæ (The Easter Cattleya). Of this superb Cattleya we have a very large stock. Owing to its beautiful, large, sweet-scented flowers, appearing about Easter-time, it is a very useful variety for cutting. We have for years spent money, time and labor in opening up an entirely new region where this Cattleya grows in luxuriance. The type is far superior to the old-time Cattleya Schræderæ, and while the colors run, as a whole, light, the variation in our type is considerable, a great number

Correspondence Solicited on Anything Pertaining to Orchids

In addition to the plants listed in this catalogue, we have always on hand a number of fine varieties which crop up from time to time, including a number of Seedling Orchids from fine crosses.

Estimates will be furnished on large quantities of Orchids for stocking conservatories or greenhouses in any part of the country.

We have always a number of applications on our books from competent Gardeners and Orchid Growers whom we can recommend to parties requiring the services of such men.

CYCNOCHES

CYRTOPODIUM

CYPRIPEDIUMS

(Lady Slipper Orchid)

Nothing in the entire Orchid family offers such a great number of species, varieties and hybrids as do the Cypripediums. The number of hybrids is becoming almost unlimited and the variations in forms and colors are almost bewildering. It is difficult to imagine anything in the plant line more beautiful, varied and interesting than a collection of Cypripediums; they are a constant source of interest to the cultivator from one end of the year to the other. The flowers when cut will outlast anything else we know, and nothing can compare in beauty and distinctiveness to a vase of cut Cypripediums of various kinds. They are the easiest of all Orchids to grow, with few exceptions.

Pot culture is preferable, and the material should consist of fibrous peat and sphagnum moss, with plenty of drainage. Cypripediums do not require any resting season and therefore should be kept moist all the year round. A temperature of 60° to 65° suits them well, with plenty of light and ventilation and lightly shaded. All the plants quoted herein are nice, healthy plants, with from two to four growths, according to kinds.

Veitchii)....

SUMMIT NEW JERSEY

DENDROBIUM

Dendrobiums are a genus of epiphytal Orchids containing many species of considerable horticultural merit. More than 300 in number, the species are distributed through the tropical countries of the Eastern Hemisphere, Australia, Japan, China, India and the Philippine Islands furnishing large quantities. Most of the commercial Dendrobiums are easily cultivated, and their brightly-colored, serviceable flowers are freely produced. In dealing with such an extensive genus, having so many different forms, it is but natural that the mode of culture should vary somewhat, but their treatment can be understood and the desired result usually accomplished when it is borne in mind that as a general rule they require heat and abundance of moisture when growing, a season of cooler temperature and a reasonable exposure to air and light to ripen the growth, and a drier season to produce and mature the flowers, which are mostly large and showy, delicately colored and quite fragrant. In habit, the plants vary from the dwarf and tufted, about three inches in height, to species with pseudo-bulbs growing three to four feet high and lusty in proportion. A compost of fibrous peat and sphagnum moss, in equal parts, suits them best, and they should be grown in pans, hung near the glass.

LÆLIA

The Lælias are among our finest Orchids, and should occupy a prominent place in every collection

collection.	
L. acuminata (rubescens). Flowers white, sometimes tinged with rose, on spikes 10 to 15 inches high; flowers during the Winter months and is	Each
very useful for cutting. Costa Rica (See illustration page 35)	\$2.50
L. albida. Flowers white and pale pink, veined with yellow, on many-flowered tall spikes. November to June. Mexico	2.50
L. anceps. Flowers 4 inches across on 2- to 6-flowered scapes, often 3	00

on 2- to 6-flowered scapes, often 3 feet high; sepals and petals rosy blush; lip deep purple. November-January. Mexico.......\$2.50 to 5.0 L. anceps alba. True. Flowers pure white, excepting a shade of yellow in the throat. We have probably the largest stock of these in the world; they rank with the finest and choicest Orchids known. (See illus-

choicest Orchids known. (See illustration, page 49.)...\$7.50, \$15.00 to 25.00

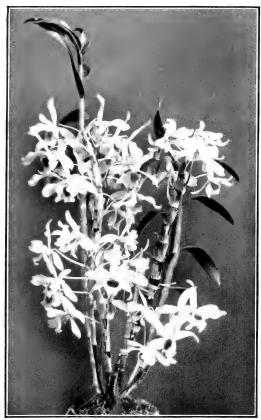

L. anceps Blanda. Sepals and petals soft pale rose; lip deep amethyst

\$3.50 to 5.00

L. anceps grandiflora. This variety has very large, highly colored flowers of fine form and substance \$5.00 to 7.50

L. anceps Hilliana. Sepals and petals pure white with pale rose lip. (See illustration, page 49.)...\$5.00 to 10.00

LAGER & HURRELL

Dendrobium splendidissimum-See page 31

LÆLIA-Continued

- L. anceps Hilliana, var. Rosefieldiensis.
 Similar in color to the preceding, but greatly superior in form in every part of the flower. Each \$10.00 to\$15.00
- **L. anceps Lageriana.** A new and beautiful variety; sepals and petals white, suffused with rose; lip dark lavender mottled and streaked with purple; lateral lobes lavender and veined with purple; throat yellow with purple veins. 15.00
- **L. anceps Percivaliana.** Sepals and petals palest rose pink; lip with bright mauve purple. \$5.00, \$7.50 to 10.00
- L. anceps, var. Sanderiana. Sepals and petals pure white, with a rose-purple blotch on the front lobe of the lip. December-February.

 Mexico (See illustration, page 49)....\$3.00 to 5.00
- L. anceps, var. Stella. Sepals and petals pure white; front lobe of lip white, with rose markings; throat yellow with purple lines. December-February. Mexico (See illustration, page 49)...\$3.00 to 5.00
- **L. anceps Williamsii.....** 5.00 to 10.00

L. autumnalis. Flowers purple, lip rose and	Each
white, with yellow center, on graceful spikes	
2 or 3 feet long; very fine. November-Janu-	
ary. Mexico (See illustration, page 36)	\$2.50
L. autumnalis alba. Pure white, except for a	
slight tinge of yellow in the throat \$15.00 to	25.00
L. autumnalis atro-rubens	3.50
L. cinnabarina. Flowers orange-scarlet, with	
a crispy lip; very valuable for hybridizing.	
January-March. Brazil\$2.50 to	3.50
L. crispa. Flowers much crisped and undulated,	
4 to 5 inches across; white sepals and petals.	
sometimes tinted with pale purple toward the	
base; lip veined and reticulated deep purple.	
Summer months. Brazil. (See illustration,	
page 36)\$3.00 to	5.00
L. Dayana. Flowers 3 to 4 inches across, rose-	
purple. Brazil	2.50
L. Dayana \times L. anceps Stella	5.00
L. elegans. A magnificent Orchid nearly ex-	
tinct in its native habitat; very variable in the	
shades of the flowers from white to pink and	
rosy purple. This Orchid is one of the easiest	
of all to grow, and propagates readily. It gen-	
erally flowers twice during the year; its mag-	
nificent trusses of flowers appearing as soon as	
the bulb is made up. We have the largest stock	
of this choice Orchid in this country; most of	
our plants are of the dark, so-called Turneri	
type. Spring and Fall. Brazil	
\$5.00, \$7.50 and	-10.00

Dendrobium thyrsiflorum-See page 31

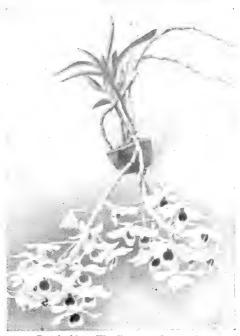

SUMMIT, NEW JERSEY

LÆLIA—Continued	
L. flava. Flowers of a clear yellow, 8 to 10 in number, on erect scapes and last a long time in perfection. February-March. Brazil. (See illustration, page 37)\$2.50 to	Each \$5.00
L. Gouldiana. Very rare and handsome; a supposed natural hybrid between L. autumnalis, which it resembles in habit, and L. anceps; flowers rose purple; lip with yellow keels. Winter. Mexico	10.00

	Each
M. Roezlii (Queen Orchid. Reinas). One of the most beautiful Orchids in cultivation; flowers flat, 3½ to 4 inches across, white, with a purple blotch at the base of each petal and an orange-yellow disc at the base of the lip. This Orchid requires plenty of heat and moisture at all times and should never be allowed to become dry. Western Colombia. (See illustration, page 41.)	\$5.00
M. Roezlii alba. Flowers pure white, except the yellow disc of the lip\$3.50 to	5.00
M. Schræderiana. A very rare Orchid; flowers fragrant, 7 to 9 on the spike; sepals and petals chestnut-brown marked and tipped with yellow, lip rose-purple and white. Summer months. Costa Rica	50.00
M. spectabilis. Flowers nearly flat, 3 inches across, white or cream colored, sometimes tinged with rose toward the base; lip vinous purple with longitudinal veins of deeper shade and margin of white or pale rose. Brazil	2.50
M. spectabilis Moreliana. Flowers usually larger than the type, of plum-purple, with bright rose-purple lip, deeply veined and reticulated. Brazil	2.50
M. vexillaria (Pansy Orchid). A species which ranks among the first of all Miltonias, yet is quite distinct among them all. The slender scapes bear from 5 to 7 large flowers of bright rosy pink. Colombia. (See illustration, page 41.)	5.00
M. × St. Andree	50.00
MORMODES	
M. Buccinator	2.50

NANODES

N.-B. gracilis......\$3.50 to 5.00

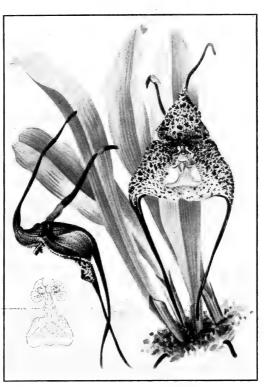

The plants included in this section of cool-house Orchids form a group of unusual beauty and utility. The plants included in this section of cool-house Orendas form a group of unusual beauty and utility. The genus, closely related to Oncidium and Miltonia, embraces about 100 species originating in the higher regions of the Andes, from Mexico and Guatamela to Colombia and Bolivia. Odontoglossum crispum, probably the most extensively grown Orchid, is particularly admired for its extremely handsome flowers and easy culture. A remarkable number of natural hybrids occur in the family, and intercrossing no doubt accounts in large measure for the size and horticultural value of the genus. With few exceptions, the Odontoglossum is found in extremely moist situations, where the annual rainfall is excessive and the temperature more or less even and cool throughout the year.

A number of beautiful and rare hybrids adapted to our climate will be found listed below, alphabetically, with the species.

cany, with the species.	
Εε	ach
O. × amabile (crispum × crispo-Harryanum).\$10	.00
0. × Ardentissima (crispum × Pescatorei) 10	.00

ORCHIDS FOR EVERYONE

By C. H. Curtis. With 53 colored and 43 black and white illustrations. Price \$10.00

ORCHIDS. THE CULTURE OF GREENHOUSE

By Frederick Boyle. Supervised by Joseph Godseff. Colored plates. Price \$3.50,

ORCHIDS, THE BOOK OF

By W. H. White, F. R. S. Price \$1.25

The author of this book is Orchid Grower to Sir Trevor Lawrence, Bart., president of the Royal Horticultural Society of England, whose extensive collection of these plants is known to every Orchid enthusiast. The author is therefore fully equipped to deal with the subject under consideration and he has produced a handy little work of the most practical nature. The chapters on handling newly imported plants and the pottings of Orchids in leaf soil instead of the old-time peat, are particularly instructive, as also are the directions given for watering ventilating, building of houses in which to grow Orchids, etc. Almost one hundred pages are devoted to the Orchid genera, which are fully described, the subject-matter being interspersed with illustrations.

ORCHIDS, THEIR CULTURE AND MANAGEMENT

By W. Watson, Assistant Curator Royal Gardens, Kew, England. Price \$10.00

Descriptions of all the kinds in general cultivation. Illustrated by colored plates and numerous engravings. A well-printed book of 554 pages. A new edition of this book has just been issued, in which some additions have been made to the plants enumerated in the first edition, and corrections made with the aid of recently published botanical works. The book is also enhanced by the addition of 8 colored plates.

ORCHID GROWERS' MANUAL, THE

By B. S. Williams, F. L. S., F. R. H. S. Super Royal 8vo., gilt edge, cloth. 300 illustrations, Price \$10.00

Contains 800 pages and descriptions of upward of 2,500 species and varieties of Orchidaceous plants, together with their synonyms, also authorities for the names, the families to which the various genera belong, the flowering period, native country and reference to figures, besides much more information. The most complete work on Orchids ever published.

ORCHIDS AND THEIR CULTIVATION

By James O'Brien, V. M. H., Hon. Secretary of the R. H. S. Orchid Committee Contains 8 full-page colored plates from color photography. \$1.25

ORCHID STUD BOOK, THE

By Robert Allen Rolfe, A. L. S., and Charles Chamberlain Hurst, F. L. S. Price \$4.00

An enumeration of Hybrid Orchids of artificial origin. With their parents, raisers, date of first flowering references to description and figures and synonymy. With an historical introduction and 120 figures and a chapter on Hybridizing and Raising Orchids from Seed.

We can supply any work in print treating on Orchids.
